Comprehension:

Read the passage given below and answer the following questions:

India became the first country to land near the Moon's uncharted south pole region at 6.03pm after 19 nail-biting minutes of descent ended in a perfect touchdown, offering irrefutable evidence of the astronomical abilities and galactic ambitions of a nation that on Wednesday announced itself as one of the world's foremost space powers.
Chandrayaan-3's touchdown which completed an extraordinary arc of decades of scientific perseverance also opened new vistas for the country's space programme in the lucrative market of space exploration and commerce.
"India is on the Moon!" S. Somnath, the chief of Indian Space Research Organization (ISRO) said, as the Chandrayaan-3's lander Vikram, with the Pragyan rover contained within, made a safe and soft landing on the Moon.
The watershed moment came mere days after Russia – a space veteran – crashed its moon craft while attempting to reach the same territory. At an estimated budget of \$75 million, Chandrayaan-3 was built at a fraction of the cost of not only previous American lunar missions but also this summer's cinema blockbusters *Oppenheimer* and *Barbie*. The Russian Luna 25 had cost \$200 million.
"This is a victory cry of a new India," said Prime Minister Narendra Modi, waving the Indian flag as he watched the landing from South Africa. Beaming scientists and officials burst into applause and hugged each other in joy at ISRO's mission operations complex at Bengaluru after Vikram lander finally came to a rest on the rugged lunar terrain after 18 minutes that pushed millions in India on the edge of their seats.

SubQuestion No : 46

Q.46 Which of the following represents the estimated cost of building Chandrayaan-3?

1. 200 million dollars
2. The same cost as the making of film *Barbie*
3. More than the cost of making film *Oppenheimer*
4. 75 million dollars

Options 1. 1

2. 2
3. 3
4. 4

Comprehension:

Read the given passage and answer the questions that follow:

For most of its existence as a modern field of study since the 19th century, economics has fared reasonably well at explaining consumer and producer behavior. It explained why buyers choose the products they do, how firms produce them to maximize profit, and how markets discover the most efficient prices. This changed with the Great Depression, when aggregate variables came into play that needed a better understanding than an assumption that markets return to equilibrium after shocks. Thus came into existence macroeconomics, the most dismal aspect of the dismal science. Economics has since diversified into quite a few other branches, such as those employing statistics and psychology, but most of its disparate originators from its failure to predict financial crises.

'Macro' by its very nature - dealing with GDP, employment, inflation and other important but sopecific matters and parameters - is headline-grabbing stuff. Governments come into play here, as do international relations. Yet, macro eludes the scientific method of testing hypotheses with repeated experiments. One can't conceivably wreck an economy to establish the effects of a shock. Instead, macroeconomists can only back-test their models against data that may be of questionable provenance. This makes prediction of the next stock market crash forever embarrassingly less exact than the return of Halley's Comet.

Microeconomics, the reputable part of the endeavor, suffers from fewer limitations to controlled parameter experiments and delivers less equivocal insights. The explosion of commerce in the modern world owes itself in no small measure to predicting actions by the smallest economic agents: humans. Here, too, heroic assumptions are made, the foremost being that human beings are rational and information is free. The crisis in economic modelling arises from aggregating billions of micro truths into one macro truth. Models are improving, so are quantitative capabilities, and the qualitative judgements that drive macro policy will become more refined.

SubQuestion No : 141

Q.141

Which one of the following is the reason, as per the given passage, for crises in economic modelling?

- 1. Aggregating billions of micro truths into one macro truth
- 2. Only equalization factors are considered in economic models
- 3. Economic activities are not sufficient to study the macro environment
- 4. Human beings behave irrationally

- Options 1. 1
2. 2
3. 3
4. 4

Match List I with List II

List – I	List – II
Phenomenon	Reasons
A. Economics defines	I. Better understanding of aggregate variables
B. Learning of Great Depression	II. GDP, Employment, and Inflation
C. Macro-economic variables	III. Human beings are rational and information is free
D. Pitfalls of Micro economics	IV. How markets discover the most efficient prices

Choose the correct answer from the options given below:

- 1. A – I, B – II, C – III, D – IV
- 2. A – II, B – III, C – I, D – IV
- 3. A – III, B – IV, C – II, D – I
- 4. A – IV, B – I, C – II, D – III

Options 1. 1

- 2. 2
- 3. 3
- 4. 4

Question Type : MCQ

Question ID : 2274279154

Option 1 ID : 22742735665

Option 2 ID : 22742735666

Option 3 ID : 22742735667

Option 4 ID : 22742735668

Status : Answered

Chosen Option : 4

Comprehension:

Read the given passage and answer the questions that follow:

For most of its existence as a modern field of study since the 18th century, economics has fared reasonably well at explaining consumer and producer behavior. It explained why buyers choose the products they do, how firms produce them to maximize profit, and how markets discover the most efficient prices. This changed with the Great Depression, when aggregate variables came into play that needed a better understanding than an assumption that markets return to equilibrium after shocks. Thus came into existence macroeconomics, the most dismal aspect of the dismal science. Economics has since diversified into quite a few other branches, such as those employing statistics and psychology, but most of its disrepute originates from its failure to predict financial crises.

'Macro' by its very nature - dealing with GDP, employment, inflation and other important but sporadic matters and parameters - is headline-grabbing stuff. Governments come into play here, as do international relations. Yet, macro eludes the scientific method of testing hypotheses with repeated experiments: one can't conceivably wreck an economy to establish the effects of a shock. Instead, macroeconomists can only back-test their models against data that may be of questionable provenance. This makes prediction of the next stock market crash forever embarrassingly less exact than the return of Halley's Comet.

Microeconomics, the reputable part of the endeavor, suffers from fewer limitations to controlled parameter experiments and delivers less equivocal insights. The explosion of commerce in the modern world owes itself in no small measure to predicting actions by the smallest economic agents: humans. Here, too, heroic assumptions are made, the foremost being that human beings are rational and information is free. The crisis in economic modelling arises from aggregating billions of micro truths into one macro truth. Models are improving, so are quantitative capabilities, and the qualitative judgements that drive macro policy will become more refined.

SubQuestion No : 144

Q.144

Which of the following is the reason, as per the passage, for driving more effective macro policies?

1. Assumption that markets return to equilibrium after shocks
2. Improved economic models are capable to understand qualitative and quantitative factors
3. Economics has fared reasonably well during financial crises
4. Every small measure is not capable to predict economic outcomes

Options 1. 1

2. 2
3. 3
4. 4

The crisis in economic modelling arises from aggregating billions of micro truths into one macro truth. Models are improving, so are quantitative capabilities, and the qualitative judgements that drive macro policy will become more refined.

SubQuestion No : 145

Q.145

Given below are two statements:

Statement I : Macroeconomists can only back-test their models against data that may be of questionable provenance.

Statement II : Macroeconomic variables elude the scientific method of testing hypotheses with repeated experiments.

In the light of the above statements, choose the most appropriate answer from the options given below:

1. Both Statement I and Statement II are true
2. Both Statement I and Statement II are false
3. Statement I is true but Statement II is false
4. Statement I is false but Statement II is true

Options 1. 1

2. 2
3. 3
4. 4

Chosen Option : 1

Comprehension:

Read the given passage and answer the questions that follow.

Over \$350 billion of private capital has been deployed over the last decade, which has propelled more than 5,000 enterprises. These new businesses are anchored in innovative business models combining the full potential of technology, facilitating every Indian to fulfil their aspirations.

The big shift in the last decade is the reimagination of India as an addressable market of 300 million households, a massive shift from only 20 million households in tier-1 cities earlier. This has been propelled by the strong partnership between entrepreneurs and the PEVC ecosystem. The share of FDI funnelled into PEVC has surged to 50-60%, up from 20-30% two decades back.

Besides the tremendous focus on value creation, the PEVC industry has brought about multidimensional progress in the economy. The principles of responsible investing that this industry is committed to have enabled the building of a more equitable, inclusive economy, and one that has earned the trust of large global investors as an attractive investment destination.

The PEVC ecosystem sparked a renaissance, empowering young minds to take a bold leap. This led to a change in mindset where entrepreneurship is now an accepted livelihood and, indeed, a proud way of life. Today, startups and new businesses are celebrated, and many are giving up established careers to follow their heart, with families standing as stalwart supporters of entrepreneurship. The proportionality of risk and reward has been embraced, forging a harmonious relationship between uncertainty and achievement.

Stories at home and those that went global are a testament to the power of partnerships between the capital provider and entrepreneurs, transforming a large democracy to be self-reliant, and elevating over a billion people to a new world of greater aspirations and confidence.

This revolution has been largely possible because of GoI's thrust towards attracting capital. The framework of alternative investment funds (AIFs), GIFT City IFSC, Startup India programme and budget allocations, coupled with progressive amendments such as GST and India Stack, have made India an attractive destination for investment.
